PRE-AUDIT CLEANING WITH DRY ICE CLEANING

- **Less chance of failing audit**
- **BRC, HACCP, FDA and EPA approved**
- **Increased production**
- **Improved end product quality**
- **Proven to kill bacteria**

Ensuring that production environments and equipment are clean is of high priority to Quality Managers. Equipment including ovens, conveyor systems and electrical components can be of continuous concern.

Product build up can occur on equipment, and in high moisture areas, increasing the risk of mould growth. Dry Ice Cleaning provides a superior clean, kills bacteria and is safe to use on direct product contact surfaces.

Dry Ice Cleaning for Pre-Audit

Dry Ice Cleaning is a fast, effective, efficient process, which minimises downtime necessary for cleaning. Little to no disassembly of equipment is required before cleaning.

Ideal for Pre-Audit Deep Cleaning, the process effectively decontaminates surfaces with food-grade (BRC) Dry Ice. It provides a superior quality clean, leaving equipment in pristine condition.

WATCH OUR VIDEO TO SEE SOME PRE-AUDIT CLEANING PROJECTS WE HAVE UNDERTAKEN

Dry Ice Cleaning is suitable for pre-audit deep cleaning of (but not limited to) :

- Slicers & Dividers
- Electrical components & motors
- Radial Feeders
- Pack-off tables
- Labelers & Gluers
- Conveyors
- Ovens
- Mixers
- Baggers
- Palletizer
- Proof Box Grids
- Food Mold

Dry Ice Cleaning is a safe and non-toxic process. The Dry Ice which we use at Polar IceTech is a carbon neutral and sustainable media.

Polar IceTech commissioned independent research which proved cleaning with Dry Ice also decontaminates against **E-Coli**, **Salmonella** and **Listeria** and doesn't cross contaminate adjacent surfaces. Ask us for this study and we will be delighted to share it with you!

Benefits of Dry Ice Cleaning Increases Production

Dry Ice Cleaning does not generate any secondary waste. This dramatically reduces downtime needed for cleaning and associated costs considerably, therefore increasing production time and end product quality.

Superior Clean

The superior clean produced from Dry Ice Cleaning can improve equipment efficiency, reliability and performance of product equipment.

Features of Dry Ice Cleaning Non-Abrasive Process

Dry Ice Cleaning is a non-abrasive process, meaning that it will not damage any surfaces.

No Water Required

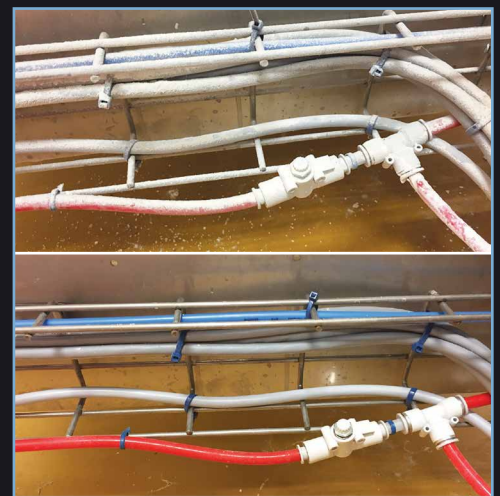

The process is also moisture free and non-conductive, so it is suitable for use on sensitive electrical equipment. As the process is dry, it will remove mould without contributing to further growth.

How can Polar IceTech help?

At Polar IceTech, we partner with industry to maximise production output and improve product quality and yield. We mobilise teams across the island of Ireland to provide this service.

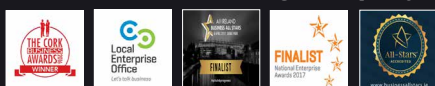

For nearly 15 years, our teams have been working in some of Ireland's leading Food & Beverage companies to clean high value process and production equipment.
